

The Polytech Advantage

PolyTech windows and doors offer you a European design that has proven itself for over 35 yrs. We have been manufacturing windows at our Baddeck, NS. Factory since 1988. European -designed Tilt and Turn window technology has been used for many decades.

Tilt -and Turn windows open in at the top for air ventilation and open in on the side like an inswing door for max. cleaning, ventilation or in case of Fire - easy escape exit (egress). All operations performed by one handle for ease of operation. This Unique design allows you to tilt the window in from the top eliminating direct drafts at the lower levels and provides you with a comfortable exchange of air.

Polytech Windows and Doors are handcrafted and custom made for homes and commercial projects to ensure they meet your specific needs - architecturally and aesthetically.
