

ClimaGuard 80/71 Low-E Glass

In Canada where winter temperatures regularly plummet below the freezing point, low-E glass in your windows is the first line of defense. Guardian ClimaGuard 80/71 low-E coated glass is designed to maximize solar heat gain and retain indoor heat.

When it's sunny and cold outside, keep it sunny and warm inside.

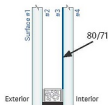

-in an argon-filled glazed unit, ClimaGuard 80/71 minimizes heat loss through windows and helps maintain warmer room-side glass temperatures – resulting in greater comfort and lower energy bills.

typical low-E coating applications:

90% Argon/10% Air filled

Double Glazed

80/71 #3 surface

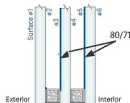

Double-Glazed

24mil OA thickness
4mm double glaze

Triple Glazed

80/71 #3 & #5 surface

Triple-Glazed

28mil OA thickness
4mm triple glaze
